

INTERMODAL
SERVICES

WHO WE ARE

With the KV4.0 Data Hub, DX Intermodal GmbH provides the innovative application for machine-to-machine data exchange in combined freight transport. The hub increases transparency between all parties involved in intermodal transport and provides logistics service providers, intermodal operators, terminals and rail transport companies with secure, barrier-free, real-time access to all relevant data and via standardized interfaces.

SERVICES & BENEFITS

- Central hub for direct access to all transport-relevant combined transport data
- Optimized data exchange costs through reduction to a single interface
- Easy access via the standardized interface format EDIGES
- Modern cloud-based solution
